Overall score (headline): N/A | Grade: —

Score status: — | Score basis: —

Valid: 0 | Expiring soon: 0 | Overdue: 0

Properties monitored: 0 | Data completeness: —

Jurisdiction scope

This portfolio includes assets framed for England compliance context. Your account default is england; each property's record takes precedence where set. Requirements that are deliberately shared across UK nations are scored the same; where rules differ by nation (for example selective licensing), only the configured rule set applies. Not legal advice.

What the score means

Scope (included): Applicable requirements for each property (for example gas safety, EICR, EPC, and licence where configured).

Excluded: Local council rules unless configured, optional uploads you chose not to track, and evidence not yet uploaded or accepted.

Definitions: Valid = The requirement is current and within date; documents are accepted where required. Expiring soon = The due or expiry date is approaching (typically within the next 30–60 days, depending on the requirement). Overdue = The due or expiry date has passed — action is needed. Missing evidence = no accepted upload on file.

Updates: The score refreshes when documents, dates, applicability, or status change. The headline may update shortly after you make changes.

This score is guidance based on your records in the portal. It is not legal advice and does not certify compliance.

Items recorded on file are not the same as independently verified evidence.

The score reflects assurance level as well as task completion.

How you're doing in each area

These percentages show how well you are meeting each part of your compliance picture right now — based on your current records, not a fixed formula you can reverse-engineer from counts alone.

Area	How you're doing (%)
Core legal requirements	72%
Accepted evidence	65%
Maintenance & actions	80%
Up-to-date records	70%

Core legal requirements: Key certificates and legal obligations for your property and area. Accepted, in-date evidence helps; missing, overdue, or expiring items lower this.

Accepted evidence: How many required items have evidence that has been accepted — uploads alone may not count until review is complete.

Maintenance & actions: Open maintenance issues and overdue actions can lower your score until they are resolved.
Up-to-date records: Items due soon and open follow-ups can lower your score until renewals or reviews are complete.

Top drivers (what is affecting your score)

Property	Requirement	Status	Date used	Evidence	Next step
